- idx Code Editor

---

## CODE

- HTML, Semantic HTML
- CSS, Bootstrap, Materialize, Tailwind
- JavaScript, React
- Java
- Kotlin

## WORKING EXPERIENCE

**Junior Frontend Developer at PT. Sale Stock Indonesia** — Jan 2016 - Dec 2017

PT. Sale Stock Indonesia is an e-commerce fashion retail platform that has the websites www.salestockindonesia.com and www.sorabel.com and has the salestock mobile app and sorabel mobile app. At that time it was the first time I was acquainted with the world of software designers, and my main task at that time was to become a website designer who works using Adobe XD and always works using the principles of Software Development Live Cycle to always make improvements and updates on our retail fashion ecommerce platform website at that time.

**Freelance IT Product Designer or UI/UX Designer** — Nov 2018 - Present

I'm a passionate IT Product Designer with a strong user-centric approach. Since 2018, I've thrived in a remote freelance environment, delivering impactful design solutions for global and local clients on platforms like Upwork, Fiverr, Freelancer and more.

- Leveraged user research (end-to-end, user-market fit) and design expertise (wireframing, high-fidelity mockups, prototyping) to deliver impactful IT product solutions for global and local clients.
- Enhanced existing websites and applications for individual and corporate clients, ensuring user-centricity and alignment with business goals.
- Possess early-stage programming knowledge (HTML, CSS, Javascript, etc.) for efficient collaboration with developers.
